**Section 2 – Infotainment System AVN-VIP Update**

1. Put the vehicle into READY mode with the handbrake applied and the shifter in the 'P' position. Insert the USB stick into the front USB port on the vehicle

2. From the home screen select the phone menu and then the phone keypad. Enter the code #*#4479*#*

3. In the engineering menu that appears select 'USB update'

4. Then press 'UPDATE' under AVN-VIP. The system will momentarily shut down and then re-start

5. During the update the following screen will be shown.

6. Once complete the following screen will be shown. Press 'REBOOT'

**Section 3 – Infotainment System AVN-SOC Update**

1. Put the vehicle into READY mode with the handbrake applied and the shifter in the 'P' position. Insert the USB stick into the front USB port on the vehicle

2. From the home screen select the phone menu and then the phone keypad. Enter the code #*#4479*#*

3. In the engineering menu that appears select 'USB update'
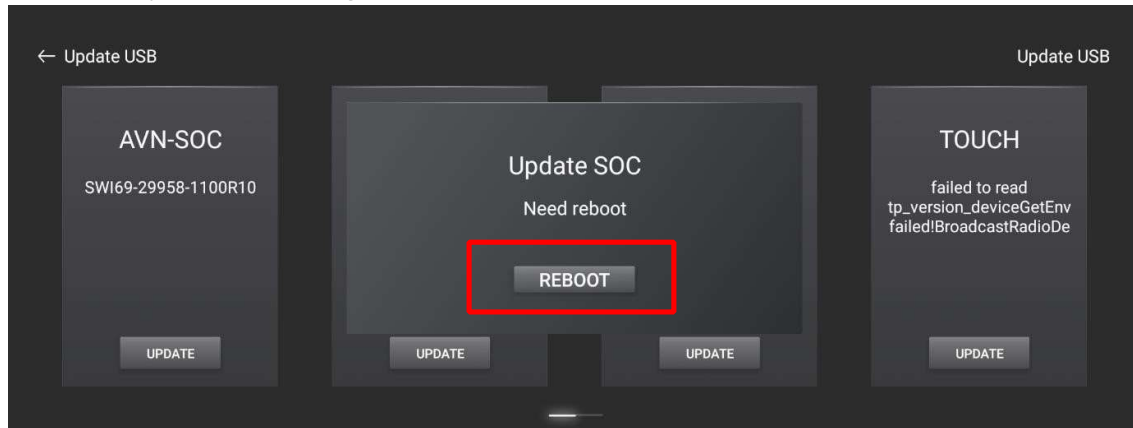

4. Then press 'UPDATE' under AVN -SOC

5. During the update the following screen will be shown.

6. Once complete the following screen will be shown. Press 'REBOOT'

7. Once the unit has fully rebooted press and hold the home key on the row of switches below the FICM until the unit restarts.

Once the USB software has been applied and the Factory reset carried out, it is important to update the software Via SIPS. For the R38 update, the software for the FICM (config and Calibration) and the HVAC (config and calibration) software must show ticks in SIPS.
